SUMMARY

Graduate Power Plant Operations Engineer with hands-on experience in Distributed Control System (DCS) operations, supporting safe and reliable boiler, turbine, and generator performance. Skilled in process monitoring, Permit-to-Work (PTW) coordination, trend analysis, and cross-functional troubleshooting, with a strong foundation in power plant engineering and a growing focus on electrical power systems, renewable energy, and sustainable technologies

CERTIFICATIONS

- **800MW Simulator TPP (Super Critical) Simulator Training Certification**– Certified by Power system Training Institute, Bangalore, India.
- **Renewable Energy Engineering: Solar, Wind and Biomass Energy Systems**-Certified by National Programme on Technology Enhanced Learning (NPTEL).
- **Next-Gen. Energy Storage - Battery and Hydrogen Technology**-Certified by COURSERA.
- **Essential Technologies for Business** - Certified by IBM.
- **AI for Everyone: Master the Basics**- Certified By EDX.
- **Diploma in multilingual computer programming** – certified by CDAC,

TECHNICAL SKILLS

- **Control Systems:** DCS (Distributed Control System), SCADA Monitoring.
- Boiler, Turbine & Generator Operation.
- Power Plant Startup & Shutdown Procedures.
- Software Tools: MS Office Suite (Excel, Word, PowerPoint), SAP (Basic Operations).
- Programming languages: C, C++.

EDUCATION

PG Diploma - Power Plant Engineering

National Power Training Institute, Neyveli, Tamil Nadu, India

Aug 2024 – Aug 2025

Bachelor of Technology – Electronics and Communication Engineering

Sri Manakula Vinayagar Engineering College, Puducherry, India.

June 2020 – June 2024

PROFESSIONAL EXPERIENCE

Power Plant

Graduate Engineer Trainee-Operations

JSW Energy Ltd, India

June 2025-March 2026

- Operated and monitored a gas-fired power plant through the Distributed Control System (DCS), ensuring safe and reliable boiler, turbine, and generator operations.
- Supported plant start-ups, shutdowns, load changes, and Permit-to-Work (PTW) activities while coordinating with mechanical, electrical, and instrumentation teams.
- Monitored process parameters, including pressure, temperature, vibration, and equipment trends, to identify abnormalities and support operational reliability.
- Contributed to a Kaizen initiative optimizing the Condensate Extraction Pump (CEP), reducing auxiliary power consumption by 15 kW, achieving ~₹6,000(6.57 lakh INR)in annual cost savings, and lowering unit auxiliary power consumption by ~0.4%.

ACADEMIC PROJECT

Environmental Aspects of Various Technologies Used for Hydrogen Generation

Environmental Aspects of Hydrogen Generation Technologies: Conducted a life-cycle assessment (LCA) of electrolysis, gasification, biomass conversion, and thermochemical water splitting, evaluating emissions, water use, and energy consumption; identified renewable-source hydrogen with carbon capture as the most sustainable pathway.
